Profile

Full-Stack Software Engineer and **AWS Certified Solutions Architect (SAA-C03)** with experience building real business applications using React, Node.js, TypeScript, PostgreSQL, MongoDB, and AWS. Currently working on an enterprise Procure-to-Pay product across frontend, backend, database, and deployment workflows.

Experience

CodeApto India Private Limited Jun 2026 – Present
Full-Stack Software Engineering Intern *Bengaluru, India*

- Building an end-to-end **Procure-to-Pay (P2P) platform** that connects purchase requisitions, approvals, sourcing, supplier onboarding, award decisions, and purchase-order release in one workflow.
- Develop React/TypeScript frontend features and Rust/Axum + PostgreSQL backend flows, including role-based access, tenant-specific data handling, and workflow rules for procurement operations.
- Improved sourcing and supplier onboarding flows by preventing invalid status changes, duplicate actions, and unauthorized PO release; added tests around the main workflow paths.

Technosys IT Management Pvt. Ltd. Feb 2025 – Aug 2025
Cloud & Full-Stack Engineering Intern *Remote*

- Migrated a client web application to **AWS EC2** and configured Route 53, IAM roles, and Security Groups for DNS, deployment access, and least-privilege permissions.
- Built Docker and GitHub Actions deployment workflows to make releases repeatable and simplify rollback when a deployment fails.

Projects

Hardware Store ERP – Production Business Platform [**live**] Mar 2026 – Present
React, Node.js, Express.js, PostgreSQL, Redis, AWS, Docker

- Built a production ERP for a retail/wholesale hardware business covering billing, inventory, customer ledger, financial reports, pricing, and unit conversion; deployed on Ubuntu with AWS RDS PostgreSQL, S3, and CloudFront.
- Designed invoice creation as a **6-step PostgreSQL transaction** with `FOR UPDATE` locking so invoice, stock, and ledger updates succeed together instead of leaving partial data.
- Moved PDF generation to BullMQ/Redis workers with Puppeteer and private S3 storage, and added PostgreSQL `pg_trgm` search so users can find products using partial or misspelled names.

Vartalaap – Serverless Real-Time Chat Platform
Next.js, AWS Lambda, API Gateway, DynamoDB, Cognito, Chime SDK

- Built a serverless communication platform with **1:1 and group messaging**, audio/video calls, and push notifications using AWS-managed services.
- Implemented authenticated WebSocket connections, DynamoDB single-table access patterns, and parallel message fan-out using `Promise.allSettled` so one failed recipient does not stop the rest of the broadcast.

Technical Skills

Languages & Frontend: JavaScript, TypeScript, SQL, Rust, React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, JWT, WebSockets, Axum

Databases: MongoDB, PostgreSQL, Redis, DynamoDB

AWS & DevOps: EC2, S3, RDS, Lambda, IAM, API Gateway, CloudFront, Route 53, VPC, CloudWatch, Docker, GitHub Actions, Nginx, Linux

Certifications & Achievements

AWS Certified Solutions Architect – Associate (SAA-C03) | Amazon Web Services Feb 2026

Advanced Certification in Cloud Computing & DevOps | E&ICT Academy, IIT Guwahati Apr 2026

CODEATHON – 3rd Place Winner | JSS Academy of Technical Education Mar 2023

Education

JSS Academy of Technical Education 2021 – 2025
Bachelor of Engineering in Computer Science *Bengaluru, Karnataka*
